

SEYCHELLES ACHIEVES A WORLD FIRST WITH UNIVERSALLY VERIFIABLE COVID-19 TEST CERTIFICATES

Secured digital certificates streamline laboratory work and provide peace of mind to citizens and travelers.

Victoria, Seychelles, April 14, 2021 - the Republic of Seychelles is going live today with another first by providing digitally verifiable secured COVID-19 test results certificates, using Travizory technology. The certificates can be authenticated by all governments, carriers, and health institutions across the world while protecting the privacy of people. The new technology allows the Seychelles Health Authorities to instantaneously issue secured digital certificates to multiple individuals in a matter of seconds, doing away with laborious paperwork.

The digital certificates with their barcodes are easy to use, they can be stored in mobile phones in Apple and Google wallets or as an email or be printed for the less technologically minded. Either way, the digital certificate can be used at both departure and arrival, as well as for access to sporting and other events or any venue requiring certificates.

Travizory's platform is designed to ensure all certificates are tamper-proof, with security at its heart using the latest encryption technology. Data protection has also been designed as a key feature, with the information on each certificate saved directly onto the people's phone, ensuring the individual retains control of the data. Travizory is applying its unique and proven framework for the issuance of digitally signed and universally verifiable certificates, used for travel authorizations to the health area. Travizory's approach is fully compatible with ICAO, EU, and WHO frameworks that were issued in the past weeks.

Doctor Leon Biscornet, Head of Seychelles Public Health Laboratory, said: "As I am sure is true for most labs today, we were spending a disproportionate amount of time and effort on administrative tasks such as to issue test certificates and distribute them to our citizens and visitors. Travizory's technology has enabled us to concentrate where we excel, which is processing samples and analyzing them with rigor with the most modern equipment."

Doctor Conrad Shamlaye, Chairman of the Public Health Authority in the Ministry of Health, said, "Seychelles is proud of our Laboratory team of highly qualified scientists who run a world-class operation, and we are always searching for ways to be more efficient. With the increase in the number of tests being conducted, choosing a technology option was better than adding more admin staff, and this allows our staff to focus on medical and laboratory work. Beyond that, we are very pleased with the Travizory digital certificate issuance system."

Alan Renaud, Principal Secretary for Civil Aviation, Ports & Marine, said, "We are delighted with our partnership with Travizory, which originally was intended to ensure the safe re-opening of our country's borders. Our deal has now extended in a very natural way to now issue secure, digital COVID-19 certificates for travelers who need them and our citizens. We are thrilled to again lead the world in the deployment of technology that enhances the travel experience while facilitating the opening of our economy, allowing citizens and guests to manage their health documentation digitally, whether this is for travel or to attend an event. Outbound travelers can sail and fly in confidence knowing our certificates can be authenticated anywhere in the world."

Renaud Irminger, CEO Travizory, said, "By issuing these certificates we ensure that residents and visitors are in possession of a document valid internationally and that anywhere on earth, any airline, airport, or health officer can digitally authenticate if they choose to. Our solution is focused on people and, unlike most other solutions being proposed, people do not need to download an app, register into a system or create an account. We leverage the apps already present in mobile phones. The Travizory technology can be deployed in weeks by health authorities or laboratories worldwide."

About Travizory:

Travizory is a Swiss-based technology company founded by senior executives uniquely combining air transport industry, biometrics, mobile, border security, and border management expertise. They founded Travizory to create seamless digital experiences between governments and travelers.

Travizory Health Credential Platform is a unique product on the market, offering the ability for countries and health facilities to issue tamper-proof and verifiable RT-PCR or antigen test results, vaccination certificates, and immunity certificates aligned with ICAO, EU, and WHO future standards.

The Travizory T-validator app, currently in production and available for download from www.tvalidator.app, empowers anyone with a smartphone to verify the authenticity of the health credentials from anywhere.

About the Ministry of Health:

The Ministry of Health is one of the largest government ministries in Seychelles, both in terms of its number of employees and the size of the government budget allocated to it.

The Ministry's mission is to relentlessly promote, protect and restore the health, quality of life, and dignity of all people in Seychelles, with the active participation of all stakeholders, through the creation of an enabling environment for citizens to make informed decisions about their health.

The Ministry's core principle places the well-being of the individual and the family at the center of all our efforts in the pursuit of social and economic development.
